

In the model section of civitai you will find plenty of different base models you can use in Fooocus

<https://civitai.com/models>

Important: Stick to Type SDXL1.0 base models in the beginning. Later in the course you will also learn how to use SD1.5 base models in Fooocus. Just set a filter in the search results in the model section of civitai to “SDXL1.0” and you will only find models you can use with the method you learned in that lection.

Insert these codes at the corresponding sections in your copy of the Google Colab notebook, as demonstrated in the video course

```
!wget -O /content/Fooocus/models/checkpoints/realismEngineSDXL_v30VAE.safetensors  
https://civitai.com/api/download/models/293240
```

To use any other SDXL base model you have to change the information **marked in blue**, as described in the lection.
