

Bash Command that you enter into the console of your Pc or Mac to create Replicate images with your own LORA via API

Open the terminal like this:

Windows: Press **Windows key + R**, type **cmd** and hit enter

Mac: **Command (⌘) + Spacebar**, type **terminal** and click on it

Adjust the following command to your API key and LORA and select the other settings how you wish:

```
curl -X POST "https://api.replicate.com/v1/predictions" \
-H "Authorization: Bearer YOUR_REPLICATE_API_KEY" \
-H "Content-Type: application/json" \
-d '{
  "version": „THE_SPECIFIC_NUMBER_OF_YOUR_LORA“,
  "input": {
    "model": "dev",
    "prompt": „IMAGE_PROMPT_INCLUDING_THE_LORA_KEY_WORD“,
    "megapixels": "1",
    "aspect_ratio": "4:5",
    "output_format": "png",
    "num_inference_steps": 50,
    "disable_safety_checker": true
  }
}'
```

IMPORTANT!! THERE MUST BE ONE SPACE BETWEEN BEARER AND YOUR API KEY!!

DON'T FORGET TO STRUCTURE THE COMMAND WITH CHATGPT AS SHOWN IN THE COURSE OR MANUALLY BEFORE PASTING IT INTO THE TERMINAL. OTHERWISE IT WON'T WORK.
