

Guideline to turn photos alive with KLINGAI

This short guideline should just give you a first idea and a starting point to ai video creation. I still experiment a lot for myself and I will update the course as soon as I have new proven strategies to show you. I just want to show you what I use for myself and what delivers good results.

Step 1) Go to Klingai.com

Step 2) Open the “AI Videos” tab

Step 3) “Click on Image to Video”

Step 4) Upload a sfw image to kling (sometimes even sfw images don’t work if there is too much skin visible)

Step 5) Enter a prompt

Feel free to use my examples:

-looking attractive into camera

-turning away, presenting her backside, elegant

-a girl walking away elegant walk, backview, view from behind

-walking towards camera, beautiful smile

Step 6) Leave all the settings at default but select “professional mode”. Select how many videos you want to create. I recommend doing 5 second videos instead of 10 second. The quality is better.

Step 7) Enter a negative prompt

I got good results with that: blur, distortion, disfigurement, low quality, grainy, abstract

Step 8) Hit “generate” and start the video creation

Step 9) Put the videos together in Capcut to get a nice video
